

North Stage Driver Application Database

December 13, 2022
Michael Persaud

Database Uses

This database will be used for the purpose of having drift event (North Stage) organizers access records of all potential drivers submitting applications to drive at the event

It will allow organizers to approve or deny applications submitted by drivers.

Through the use of scripts, organizers will be able to sort drivers by experience level

The database will also ensure that all potential drivers are not forgetting to submit crucial information that will prevent organizers from making an informed decision

Entity Relationship Model

- A driver may have zero to many applications; An application must have one and only one driver.
- An application must be to one and only one event; An event can have zero to many applications.
